Add Blocking
If your joists need to run the same direction you will run the planks.

This will also make the framing/ joists stronger is an added advantage.

1. Cut blocking out of the same joist material, then install them between joists.

2. Most building codes do not require joist hangers. 3-4 nails per side.

3. Install decking perpendicular to the supporting joists. Decking fastens to blocks.

4. Polyurethane sealant is used at wall/provided by Versadeck. Flashing will go over next.

5. Wall flashing is installed over the sealant immediately after. The siding/trim will cover.

Above diagram is a common detail, your project may require a slight variation, always have Versadeck do the design take off or review plans by others before ordering.
Stucco (side view)

Caulk between flashing and decking use polyurethane caulk sealant (Vulkem 116 gun grade caulk)

When decking runs perpendicular to the building wall, fill dry clip channel end at building wall. Use polyurethane caulk sealant (Vulkem 116 gun grade caulk)

Lap Siding (3-D view)

Exterior siding/trim
Building paper
Flexible flashing self sealing tape
Metal flashing#2 (deck to wall)
Metal flashing#1 (Ledger top Z-flashing)
Wall sheathing
Edge Trim (aluminum angle)
Fascia (deck framing rim joist/trim board)
Caulk between edge trim and plank top

The diagrams show the decking running perpendicular to the building wall. The same details apply if decking runs parallel to the building wall with the exception of filling the dry clip channel ends at building wall.

Consult with a Versadeck Expert Designer. There are other details not shown on this site that may be the best design for your deck. The above illustrations may not display the best solution specific to your application.

Hang planks and dry clips past finished deck edge/fascia trim material at least 1/2" up to 1 - 1/2" to help minimize water wicking/capillary action. The edge trim should also be sealed at all deck edges for this same reason.

Hold edge trim out 1/2" up to 3/4" allowing water to drain out of the dry clips.

Above diagram is a common detail, your project may require a slight variation, always have Versadeck do the design take off or review plans by others before ordering.
Why VersaDry

Waterproof Decking

- sq ft value x 2
- Create a Dry Space Below Without the Puddles Above

- Cooler in Sun
- No Puddles
- Scratch & Stain Resistant

Our Coatings
- It's not paint (60-80 mils)
- Cooler in Sun
- Rich Look & Feel
- Scratch/Wear Resistant
- Natural Texture
- Class "A"

Dry Clip Design
- No Puddles & No Leaking
- Water Drains → No Puddles → Water On Top
- Gasket Seal #2
- Clips in Seal #1
- Dry Clip Gutter
- Watertight Below

The Others - Pay less and get this
- A Metal Deck with Thin Paint on top
- Squeaks & Creeks: metal on metal joint
- Ribbed: industrial look
- No Gaskets (can't truly be watertight?)
