**Example Project**

Wallman WA
Run the Versadry waterproof planks in this perpendicular to wall direction. Add Blocking/Bridging between the framing joists if needed (24" O-C). You need a min. of a 1/8" per ft drop in the plank direction/away from building. This particular deck would not allow you to run planks the long direction due to the building wall bump out. (See next 3-pages for details)
Add Blocking

If your joists need to run the same direction you will run the planks

This will also make the framing/joists stronger is an added advantage.

1. Cut blocking out of the same joist material, then install them between joists.
2. Most building codes do not require joist hangers. 3-4 nails per side.
3. Install decking perpendicular to the supporting joists. Decking fastens to blocks.
4. Polyurethane sealant is used at wall/provided by Versadeck. Flashing will go over next.
5. Wall flashing is installed over the sealant immediately after. The siding/trim will cover.

Above diagram is a common detail, your project may require a slight variation, always have Versadeck do the design take off or review plans by others before ordering.
The diagrams show the decking running perpendicular to the building wall. The same details apply if decking runs parallel to the building wall with the exception of filling the dry clip channel ends at building wall.

Consult with a Versadeck Expert Designer. There are other details not shown on this site that may be the best design for your deck. The above illustrations may not display the best solution specific to your application.
Deck Edges and Drainage End

Above diagram is a common detail, your project may require a slight variation, always have Versadeck do the design take off or review plans by others before ordering.

No Puddles on Top  Versadry Watertight Below

Example Versadry watertight Decking System Project: Wallman WA
Why Versadry

Waterproof Decking

Create a Dry Space Below Without the Puddles Above

- Cooler in Sun
- Scratch & Stain Resistant
- No Pitting Sound
- THICK Comfort Coating
- Class “A”
- Dry-Clips Prevent Water Puddling
- Watertight - Built with Gasket Seals
- Versatile Drainage Options
- Environmentally Responsible
- Non-Combustible - Class A
- Available in Lengths up to 32'
